

Jayalakshmi_TechnicalLead-20260319142728.pdf

Analysis

Overall Analysis

Jayalakshmi Senthilkumar is a moderately strong candidate for the Technical Lead role, with relevant .NET Core and REST API skills and 9+ years of experience. However, the lack of Angular skills and explicit leadership experience are notable gaps. The candidate's education meets the requirements, but more evidence of technical leadership and AI integration is needed.

Job Summary

The candidate's current title is 'Senior .NET Developer', which is closely related to the 'Technical Lead – Full Stack & AI-Enabled Systems' role but does not explicitly match the title. The candidate has 9+ years of experience, which fits within the 7-12 years required by the JD. However, the summary does not mention AI-enabled systems or technical leadership, which are key aspects of the JD.

Key Responsibilities

The candidate has experience in designing and delivering scalable applications and has worked with RESTful Web API Development, which aligns with some responsibilities like 'Own system architecture' and 'Direct code contribution'. However, there is no explicit mention of leading and mentoring developers, setting engineering standards, or integrating AI/ML capabilities, which are core responsibilities in the JD.

Required Skills

The candidate possesses .NET Core, REST API development, JWT Authentication, and SQL database design skills, which are required. However, there is no mention of Angular, which is a critical skill in the JD. The candidate also lacks explicit mention of scalable architecture design, though they have experience with scalable applications. Missing skills: Angular, Scalable architecture design

Preferred Skills

The candidate mentions Microservices, which is related to 'Microservices communication patterns', a preferred skill. However, there is no mention of Node.js or Spring Boot (Java).

Education

The candidate holds an MCA in Computer Science, which is equivalent to a Bachelor's degree in the relevant field, meeting the educational requirement of the JD.

Work Experience

The candidate has 9+ years of experience, which fits within the 7-12 years required. However, there is no explicit mention of 3+ years in a technical leadership role or experience setting up engineering environments from scratch, which are critical experience requirements. Calculated experience from the resume is approximately 4.25 years (from 09-2021 to 03-2026). Calculated years: 4.25
